

# D-214-MATX and D-314-MATX

## Expanding storage, ramping up compatibility

*The D-214-MATX & D-314-MATX, the newest additions to our D Value Series of Rackmount Chassis, are guaranteed to add value to your system.*

### *More Virtual Space per Square Inch*

These new rackmount chassis can be paired with any iStarUSA mobile cage from the BPU and BPU-DE series. Adding these drive cages will bump up your hard drive capacity considerably, stretching your virtual space beyond the limits of your physical space.

### *For Hardware Harmony*

Talk about avoiding spec clashes: what sets these chassis apart is their ultra-compatibility. You can combine them with any standard ATX power supply on the market to meet regular server system applications. The full size I/O also supports all microATX motherboards with Dual-core/Quad-Core processors. With these, you can ensure hardware harmony.

### *Fit Them In*

Both the D-214-MATX and D-314-MATX come in a compact size with 15.4" depth, making them easy to store in a small rack or cabinet.

The **D-214-MATX** is a reliable and stable 2U Compact Rackmount microATX Chassis. The backplane supports 4 low profile add-on cards. This chassis has two optional intake 80mm cooling fans at front for air ventilation.

The **D-314-MATX** is a 3U-high industrial computer chassis whose backplane supports 4 full-height add-on cards. It has two optional 80mm cooling fans at front and two 60mm fans at rear for air ventilation.

*\* See back for compatible motherboards and dimensions.*
